

SUPPLEMENTARY FIGURE 2. Adult monkeypox cases by week of report,\* patient gender identity (A),<sup>†</sup> and number of sexual or close intimate contact partners (B)<sup>‡</sup> — United States, May 17–October 6, 2022

\*Excludes cases in persons aged <18 years and one case in a person missing information needed to calculate report date.  
<sup>†</sup> Cases in persons whose reported sex differed from their gender or who reported being transgender were classified as transgender. For cases in persons with reported information on sex but not gender, sex was used to categorize these persons as cisgender women or men. For cases in persons with reported information on gender but not sex, gender was used to categorize these persons as cisgender women or men.  
<sup>‡</sup> Sexual or close intimate contact is defined as engaging in any sex (e.g., vaginal, oral, or anal sex) and/or close intimate contact (e.g., cuddling, kissing, touching partner's genitals or anus, or sharing sex toys) in the 21 days before symptom onset
